

-/ STRAIL® D-Kerbstone

STRAIL® Drainage Kerbstone – Support for the outer panels and drainage of the surface water at STRAIL® level crossings

Especially at steep roads where rain water, and dirt, flows into the track bed. The ballast gets moist, silts up and consequently loses its function. The **STRAIL®** Drainage Kerbstone keeps the surface water coming from the road out of the level crossing. A gutter (protected by a grid) leads the water into existing sewers where it can seep away into ground. Installing **STRAIL®** D-Kerbstones is no different to installing standard T-Kerbstones. It offers the exact same supports. Thereby, the **STRAIL®** D-Kerbstone combines two important benefits for you: Drainage and continuous support for **STRAIL®** outer panels. The D-Kerbstones complements the **STRAIL®** product range perfectly.

- ◆ suitable for all standard outer panels and **pontiSTRAIL 713**
- ◆ the geometry of the grids allows optimal water absorption
- ◆ tongue and groove connection of the gutter
- ◆ installation with standard **STRAIL®** prefabricated foundations is possible
- ◆ lengths: standard 2,000 mm, addition: 1,000 mm
- ◆ suitable for heavy load traffic (classification drainage channel according to EN 1433 for heavy load traffic, type E600; Classification grid for heavy load traffic as cover for drainage channel EN 1433)
