

-/ profileSTRAIL

profileSTRAIL, which is made of vulcanized rubber, ensures quick and trouble-free access to rails and rail fastenings since it can be easily removed at any time.

Due to the fact that it is installed and removed effortlessly it does not impede work progress in any way. This already becomes evident during initial installation of the system, since the element also serves as shuttering.

profileSTRAIL can be used inside and outside of maintenance halls, as well as service roads. They provide comfortable and safe crossing for delivery vehicles and forklifts.

Our rubber element is available for all common rail and sleeper types and merely requires a sleeper spacing of 600 mm. A solid end bracket secures the elements from becoming displaced.

Please contact us at any time to receive a customized solution to fit your needs.

- ◆ handy size ensures fast installation and removal
- ◆ eliminates tripping hazards and closes gaps in crossing areas
- ◆ suitable for forklifts, as well as delivery vehicles
- ◆ allows simple access to the rail at all times
